

CTV101, Ba CTV101, Ba Speed Control Unit

Produktnr:

R21V035

UTGÅNGEN ARTIKEL

Den här artikeln är inte längre tillgänglig.

The CTV101 accurately controls the EDI101 rotation speed.

Optimum accuracy

Better than $\pm 0,1\%$ rpm fully reproducible experimental conditions thanks to continuous optical reading and monitoring of the rotation speed.

Clear reading

The measured rotation speed is displayed on a four-digit LCD.

Remote control

Speed control can be driven through a 0-5V external signal according your experiment programming.

Rugged rotating disc electrode control

When used with the EDI101, this speed control unit is ideal for use with any potentiostat/galvanostat.

Versatile applications

It is available with a wide choice of quick-fit exchangeable tips in various materials: platinum, glassy carbon, gold etc.

Specifikationer

Vad ingår i leveransen:

Includes: speed control unit and manual
