Long-term accuracy and reproducibility with Red Rod technology

General-purpose pH electrode with Red Rod reference system. Measuring range 0 to 12 pH, -10 to 100°C. Liquid junction: porous pin. With temperature sensor.

The symmetry of Red Rod electrodes means that the iso pH is the same as the zero pH which provides highly reproducible results even when temperature fluctuations occur.

Reproducible measuring conditions ensured by a special bayonet head

Wide temperature range from -10 to 100°C

Fast and accurate response

Stable signal

Trouble-free liquid junction

Specifikationer

Dimension (D x L):	12 mm x 103 mm
Elektrolyt:	Refillable: Sat. KCl
Garanti :	12 månader
Givar koppling:	Porous pin
Givartyp:	Glass
Kabellängd:	1 m
Längd:	103 mm
Material:	Sensor body: Epoxy
Mätområde:	0 - 12 pH
Specialfunktioner:	Red-Rod reference system
Temperaturområde :	-10 - 100 °C
Termistor:	NTC 10 kohm
