Verderflex Dura 15 pump for use with the ScrubberMonitor EGCS washwater monitoring cabinets. Pumps are typically a weak point in washwater monitoring cabinets, compromising the reliability of the entire monitoring system. Not anymore. The Dura 15 is a true industrial workhorse designed to pump viscous and high-solid content solutions. Self-priming, and problem free pumping of gaseous liquids ensure a reliable sample flow. The ability to run dry with no damage, long life hoses, and no seals or valves ensures that this pump will run reliably with minimal maintenance for the life of the scrubber.
